

INFLOW PIPE

Inflow pipe

The inflow pipe provides a steady flow into the backup tanks. The distribution is optimised by the conical shape. The surface of the lance is cathodic-dip painted (EPD-coated).

It can be installed in sleeves with a female thread Rp 1½". Assembly proceeds with the respective sleeves for the boiler or heating process.

Specifications

Type	ESL 64
Item no.	1610608
Thread	Rp 1½"-R 1½"
Thread length	400 mm
Design	EPD-coated
Spanner size	55 mm
Max. volumetric flow in continuous operation	4 m³/h
